

Colourless

i.CRYSTAL is a transparent MS-polymer adhesive which is ideal for adhesion in visible locations.

The adhesive is perfectly suitable for stress equalizing adhesion, sealing and mounting work.

Suitable for use with:

- ✓ Glass
- ✓ Steel, stainless steel, aluminium, brass and copper
- ✓ Plastic (e.g. Hard-PVC, soft-PVC, glass-fibre reinforced plastics)
- ✓ Wood and wood material
- ✓ mineral composites
- ✓ and many others

NEW: The innovative gas cartridge **i.CRYSTAL+** enables a labour-saving, precise and rapid use – without a cartridge pistol!

APPLICATION EXAMPLES

- Visible sealing and adhesion sites
- Adhesion of stone, natural stone and fine stoneware
- Mounting on glass surfaces and mirrors
- Profile-/glass adhesion
- Window sealing
- Adhesion of painted and enamelled glass

PRODUCT QUALITIES

- + Transparent and odourless
- + Water-, weather- and aging-resistant
- + High temperature resistance
- + No mould formation typical of drilled holes
- + Removal without any residues or damage
- + EU REACH conformant
- + No hazard labeling needed
- + Vibration-resistant, noise insulating and stress equalising

General advise: The bonding surface must be clean, free of oil and dust and able to bear weight. In the case of adhesions between air-tight surfaces, moistening of the adhesive mass is necessary. For pre-cleaning and humidification we recommend our i.CLEANER. Please find more details in its technical data sheet and safety data sheet.
